

ISTQB AGILE TESTING TRAINING

ISTQB®

The ISTQB Agile Fundamental training course focuses mainly on agile testing techniques and processes while exploring the mind set and role of the agile tester. Learning objectives include the ability to differentiate the different types of testing on an agile project. In addition, we explore how business, development, and testing

representatives best collaborate in an agile development cadence. Participants will learn various agile test strategies coupled with techniques related to feature driven testing, release planning, testing within sprints, regression testing, performance testing, pre-deployment and production support testing.

QUALITY IS EVERYONE'S RESPONSIBILITY!
