

ENTERPRISE MOBILE SOLUTIONS

The DVT Enterprise Mobile Solutions team offers the full range of DVT offerings, but with an enterprise mobile solutions focus.

The team provides **consultation** on enterprise mobile strategy, mobile application development and mobile quality assurance approaches.

From a solutions delivery point of view the team is able to provide a wide range of **solutions** including native application development and app store management, cross platform solutions, mobile web development, mobile software quality assurance and user interface design catering for specific platform paradigms.

“Enterprise clients should concern themselves with the strategic objectives they are trying to achieve with their mobile channel integrations and outsource the solution delivery details that deal with the complex fragmentation of mobile channels, operating systems, physical devices and provisioning approaches that make up the mobile ecosystem.”

*Johan Pieters,
DVT Cape*

DVT doesn't just develop specialised **mobile applications**, we also retain all the skills to **support** you in the **integration** of your **mobile channels** with your **existing enterprise systems**.

CONTRACTUAL OPTIONS

We offer fixed-price options for clients that require a complete, outsourced solution; team-based assignments when it is difficult to mobilise a reliable and tested team for ad-hoc projects; short-term, specialised, professional services particularly suitable for short or medium term assignments; and periodic allocation of skills for ad-hoc, sporadic activities that only require a limited amount of time.

Mobile technology platforms are different for each market segment, and it is crucial to define your mobile strategy and the associated requirements before committing to any particular set of platforms.

There are many mobile platforms available, each fragmented into multiple versions and supporting a vast array of physical devices with varying attributes. This complexity, which includes a fast growing list of application stores, makes it critical to make platform specific, or cross platform decisions at an early stage.

PLATFORM SUPPORT

**WINDOWS
PHONE 7**

**GOOGLE
ANDROID**

**RIM
BLACKBERRY**

APPLE iOS
(iPhone, iPod Touch, iPad)
