

**GROUP FIVE  
CHOOSES DVT**

The pilot phase of an innovative mobile solution, developed by software house DVT to track construction materials across Africa, has gone live at two Group Five construction sites in Ghana and Tanzania. The solution has garnered calls from Group Five competitors asking for details, due to the competitive advantage the solution gives Group Five. The solution DVT tailored for Group Five provides operational value by ensuring that dispatch clerks have an electronic list of items, which the user ticks off as items are loaded. Dispatch clerks use handheld scanners to scan in each item as it is loaded onto containers.
