

FORGET THE HYPE

The current mania and hype surrounding mobile technology needs to be put into perspective. With the buzz surrounding it, one could be forgiven for thinking we are undergoing a computing revolution, says Chris Wilkins, CEO of DVT. But as we have seen so often in technology, nothing really changes. We need to have a presentation layer, an input layer, and a logic layer. That's pretty much it. You need to be able to communicate with a device, it needs to be able to communicate with you, and you need a central processing unit.
